Using the Green Port Guidelines to move towards Sustainability

Sydney Ports is using its *Green Port Guidelines* to move towards more sustainable port development. The following encouraging measures have been initiated in various developments by port tenants.

- Implementation of waste management plans and recycling policies adopted by all tenants to reduce the amount of waste going to land fill.
- Water reduction targets through efficiency measures installed in staff amenities.
- A commitment to reduce energy consumption in amenities in 60% of developments.
- Installation of rain water tanks to reduce potable water use in 44% of developments. Sydney Ports will continue to assess viable environmental initiatives and sustainability projects suitable to port land and operations.
